

Keith Alexander, Paul Brodhead, Richard Bustamante

Discussion (a series of group text messages that have been transcribed by hand):

Keith (K): Imma create the repo during class today. I got the code working for the TLB/FIFO. I'm just having some minor trouble with outputting to the text file. Rn I have the code outputting to the console and it matches up with the correct.txt file prof gave us. Hopefully y'all can give me some assistance with that. Thanks bros

Paul (P): Can I get added to the GitHub please?

K: I just send you an email. Lmk if you got it

P: Just got it and cloned the repo. How much have we gotten done?

K: I have the whole fifo implementation but I just need help outputting it to the output text files. My code just outputs to the console and it works correctly but I kept getting weird errors for the text files if you can help with that. I told rich about it and he said he would take care of it but I'm not sure if he started it yet. You could ask him if he started the LRU or started on outputting my fifo implementation to output files.

P: Gotcha. So all we have left is lru and outputting to a text file?

K: Yeah pretty much

P: Rich are you working working on lru or outputting the stuff to a file?

Richard (R): I can do either one. You pick

P: I'll do outputting to a file if that's alright with you

P: Just finished the fifo program and cleaned up the outputs to be exactly as stated in the project. Rich you want any help with LRU?

R: Lol we'll see. I'll try to get it done early today

P: How goes the lru implementation?

R: Just got out of chapter so now I can work on it. Which file am I writing the LRU code in?

P: main_pr2
